

Press inspections to maximise equipment availability

Assessment of the technical condition of your Rapida press

Our experienced service technicians perform a detailed mechanical and electrical audit to assess the technical condition of your press. A comprehensive report provides an overview of the inspection findings. You receive information on the current status of both the overall press and its main components, on the percentage shares of individual condition categories, and on the expected duration of corresponding repairs. By prioritising the recommended spare parts according to the urgency of replacement, we help you to achieve the greatest possible effect from your spare parts budget.

we're on it.

Implementation

You should plan around 2 to 3 days for the complete inspection of your press. To enable detailed assessment and evaluation, the press must be taken out of production for approximately 10 hours per day.

Product information

- Detailed assessment of the press condition according to a standardised checklist
- More than 210 mechanical and electrical items are addressed
- Evaluation according to condition and potential impact on production
- Proactive determination of potential sources of error
- Prioritisation of measures according to urgency
- Summary of results in a clearly structured report

Your benefits

- **Maximum availability of your Rapida press by avoiding press faults and downtimes**
- **Individual scope – adapted to your time constraints**
- **Prioritisation of spare parts according to urgency of replacement**
- **Support to achieve the best possible effect from your spare parts budget**
- **Long-term value safeguards and thus increased resale value for your press**
